

SERVICE FRAMEWORK FOR CARDIOVASCULAR HEALTH AND WELL BEING

SECTION 4: STANDARDS FOR COMMUNICATION AND PERSONAL AND PUBLIC INVOLVEMENT

Effective communication with service users is essential to all aspects of the adequate planning and provision of health and social care services. Without effective communication, there can be no effective participation by service users in any partnership with Health and Social Care.

Communication will be of increasing importance as HSC strategies and targets are worked through. For example, it is essential to develop patient partnerships to achieve success in disease prevention and in the management of long-term conditions. It will be essential to involve service users in strategic change such as an increase in home and community-based service provision and reduced dependence on hospitals if such initiatives are to proceed at all.

Poor communication tends to be at the heart of most complaints, much negative experience and many negative perceptions and attitudes on the part of service users.

For many, good communication may be seen as to be assumed, or implicit. However, good communication cannot be presumed. It is a function requiring specific skill and training, dedicated resources, priority and focus to the same extent that clinical service provision, service planning and governance require these things.

For these reasons, a specific standard for communication should be part of all service frameworks. Making good communication part of the guiding ethos of the framework is unlikely to ensure that it is addressed with the same focus and priority as any of the individual targets.

It might be suggested that most of those charged with delivering on the frameworks will focus first on what it specifically requires them to do within their area of responsibility. A standard on communication requires action at the same level and in the same way.

A standard on personal and public involvement has also been developed.

SERVICE FRAMEWORK FOR CARDIOVASCULAR HEALTH AND WELL BEING

Overarching standard 1:

All patients and carers should expect effective communication with them by health and social care organisations as an essential and universal component of the planning and delivery of health and social care.

Rationale:

Effective communication has a significant impact on all aspects of care provision from disease prevention, to diagnosis, to self-management of long-term conditions. Poor communication is a significant factor in most complaints against HSC organisations.

Evidence:

SERVICE FRAMEWORK FOR CARDIOVASCULAR HEALTH AND WELL BEING

Quality Dimension

Safe

Good communication with patients/clients/carers enables adequate understanding of, consent to and compliance with treatment and care and contributes to audit and monitoring.

Timely

Good communication helps to deliver and sustain appropriate patient/client/carer access to services and a clear understanding of the role and responsibilities of the service user in achieving health and care outcomes.

Efficient/ Effective

Health and care outcomes themselves are enhanced through improved patient partnership and dialogue, including, but not limited to - diagnosis, self-referral, health promotion, disease prevention and management of long term conditions.

Equitable

As a universal requirement, good communication helps to ensure input by all service users on all aspects of the services they receive assisting in the highlighting of gaps in provision and areas for improvement.

Patient Centred

Patient centredness cannot be delivered or claimed in the absence of good communication with service users. Good communication is a prerequisite of patient centredness.

SERVICE FRAMEWORK FOR CARDIOVASCULAR HEALTH AND WELL BEING

Performance Indicator	Data source	Anticipated Performance Level	Date to be achieved by
HSC organisational communication strategies should show evidence of direct patient / client feedback as part of regular audit of their effectiveness.	HSC communication strategies.	90%	March 2010
HSC organisational complaints reports should show evidence of action where communication is the primary factor	HSC complaints records	90%	March 2010
HSC organisational strategies for clinical and social care governance should show evidence that direct patient feedback is included in relevant audit and monitoring	HSC CSCG strategies	90%	March 2010

SERVICE FRAMEWORK FOR CARDIOVASCULAR HEALTH AND WELL BEING

Overarching standard 2:

All patients, carers and the public should have opportunities to engage actively and meaningfully with health and social care organisations at all levels.

Rationale:

Actively involving patients and the public in the planning and provision of health care in general has been noted to bring many advantages to both those who receive and those who provide care. These include:

- Increased patient satisfaction and reduction in anxiety with positive health effects
- Improved communication between service users and professional staff
- Better outcomes of care with greater accessibility and acceptability of services
- Bridging of the gap between those who avail of services and those who provide care
- Recognition of the expertise of the recipient of care developed through experience
