Data Source: Payment Calculation and Analysis System (PCAS) as at 31 March 2006, taking account of locally resolved adjustments up to 30 June 2006. Raw Prevalence figures are as at 14 February

<sup>1</sup>The list size is the total number of patients registered with each GP practice at January 2006.

<sup>2</sup>The weighted list is for information only and is not used in the Quality & Outcomes Framework calculation. It refers to the practice list at January 2006 weighted by the GMS Allocation Formula indices (see QOF Links page for further

<sup>3</sup>For each practice the raw prevalence per 1,000 is the number of patients on each disease register, divided by each practice's list size, multiplied by 1000. This is not reported where the figure is based on fewer

<sup>4</sup>Adjusted Disease Prevalence Factor (ADPF) narrows the range of adjusted raw prevalence per 1,000 values by square root transforming each value and then rebases that figure around the NI adjusted raw

Data Source: Payment Calculation and Analysis System (PCAS) as at 31 March 2006, taking account of locally resolved adjustments up to 30 June 2006. Raw Prevalence figures are as at 14 February

<sup>1</sup>The list size is the total number of patients registered with each GP practice at January 2006.

<sup>2</sup>The weighted list is for information only and is not used in the Quality & Outcomes Framework calculation. It refers to the practice list at January 2006 weighted by the GMS Allocation Formula indices (see QOF Links page for further

<sup>3</sup>For each practice the raw prevalence per 1,000 is the number of patients on each disease register, divided by each practice's list size, multiplied by 1000. This is not reported where the figure is based on fewer

<sup>4</sup>Adjusted Disease Prevalence Factor (ADPF) narrows the range of adjusted raw prevalence per 1,000 values by square root transforming each value and then rebases that figure around the NI adjusted raw
